### 1 Approval of agenda

The agenda was approved with the following additions:

- Usage of Validity Start/End in BRS for Combined grid and supply billing, see item 9.1 under AOB.

### 2 Approval of minutes from previous meeting

The minutes from previous meeting were approved without any comments.

### 3 Review BRS for Measure validated measured data

The comparison of the BRS and the new Dutch requirements continued, among others the following changes were agreed:

- Resolution and Position were made optional for the four validated measured data documents (profiled APs, continuous metered APs, Exchange Points, and installations) - can be omitted if sending only one volume in the Observation class;
- Metering Point Type code “E19 Combined” was removed for the four validated measured data documents for the Direction (profiled APs, continuous metered APs, Exchange Points, and installations) – only valid as master data;
- The note linked to the Observation class for continuous metered APs: “If there is a Register read, the cardinality of Observation shall be [1]” was removed, since several countries (such as Sweden) sends the Meter read together with time series.

**Action:**

- Kees will provide code lists (with definitions in English) for Origin, Validation Status and Repair Method.
- Kees will investigate the structure and usage of the “green classes” from the Dutch requirements.

## 9 AOB

### 9.1 *Usage of Validity Start/End in BRS for Combined grid and supply billing*

During a Nordic meeting earlier today, it was noticed that the Validity Start/End still is used for some of the documents in the BRS for Combined grid and supply billing.

Can we do a quick review to see if “Validity” should have been removed?

#### **Conclusion:**

- The BRS is correct. The related data exchange is a snapshot from the database, hence the various ‘records’ have a validity interval, and the information is sent with a snapshot date.

Item closed.
